## SEARCHING FWRS DATABASES ON THE INTERNET

In the late 1980's, **Fish and Wildlife Reference Service (FWRS)** Search Analysts conducted up to 900 literature searches a year; last year, 49 searches were conducted. These days most biologists, as well as students and college professors, have access to the Internet, with its numerous on-line databases, and are doing their own literature reviews. Those researchers without direct internet access may use agency libraries, or even go to local public libraries that provide internet access as well as on-line catalogues of their own collections.

Initially, only the FWRS' **Main Bibliographic Database** was available for on-line searching via a **WAIS** (wide area information server) on the U.S. Fish and Wildlife Service's website. Beginning in 1996, the FWRS has designed and maintained its in-house databases using various versions of *Inmagic Text Retrieval Software*: first a DOS-based version and later *DB/TextWorks*, a Windows-based version. In 1998, the Federal Aid Division (FA) purchased the *Inmagic WebPublisher Software*, a product which allows *DB/TextWorks* databases to be converted for use on the Internet. Now, with FA maintaining its own website and Windows NT Server, FWRS has had the opportunity to move all of the FWRS databases onto the Internet for on-line searching.

The **FWRS website** (<http://fa.r9.fws.gov/r9fwrs/>) currently contains six databases: **Main Bibliographic**, **Survey/Inventory**, **Clean Vessel Act**, **Boating Access**, **Black Bass**, and **Habitat Conservation Plans**. The *DB/TextWorks* software is used to index the report citations for these databases, as well as design on-line query screens and report forms. Thus, it is relatively easy to copy over all our databases and all related forms to the *Inmagic WebPublisher* software on the FA Windows NT Server. These software applications allow us to frequently update our FWRS databases, giving the searcher the most current information we have received. Currently, documents are processed within a 3-month period for inclusion into the on-line databases.

To retrieve information on fish and wildlife management, the researcher will want to search the **FWRS Main Bibliographic Database**, which contains primarily FA project final/completion reports, and some U.S. Fish and Wildlife Service and journal reports. FA progress reports and survey/inventory data are contained in the **Survey/Inventory Database**. The other databases are very subject specific (e.g. Clean Vessel Act Database), but are still searchable using the same techniques described below. To review information on all of the FWRS on-line databases, please browse the following website: <http://fa.r9.fws.gov/r9fwrs/dbinfo.htm>.

Searching FWRS databases requires a basic knowledge of **Boolean Logic** and search strategies. Boolean Logic allows the searcher to combine words (or codes) with specific operators (and, or, not) to narrow a search down to the subject matter the user is trying to retrieve. The *Inmagic Boolean Operators* are **&=and**, **=or**, **!=not**, which along with search terms can be nested with parentheses. For example, a "**Simple Search**" of the **FWRS Main Bibliographic Database** on "**deer food habits in Texas or Oklahoma**" would have a search strategy like this: in the **Subject Box** - put **deer & 'food habits'**; in **Geographic Location Box** - put **(texas / oklahoma / tx / ok)**. Note that both the full name of states or the 2-letter state postal code may be used in the **Geographic Location Box**. A more general search strategy would be to use the term "food" which would retrieve citations on "food supply," "food consumption," "food habits," etc. Likewise, if you only use "habits" you would retrieve citations on "habits and behavior." FWRS thesaurus terms used to index and retrieve reports may be reviewed on-line: Terms A-M via <http://fa.r9.fws.gov/r9fwrs/fwrsworda.html>; Terms N-Z via <http://fa.r9.fws.gov/r9fwrs/fwrswordn.html>; and Scientific Names via <http://fa.r9.fws.gov/r9fwrs/fwrsname.html>.

In the search strategy above, to narrow the deer food habits search to white-tailed deer; the best results would be achieved by searching the **Major Term Box** with our indexing term "*deer, white-tailed.*" The same format is consistent with other species (e.g. bass, largemouth). A **broader** search strategy would be to search the **Subject Box** with a phrase like "*deer & white-tailed.*"

We encourage researchers to search our on-line databases. Help Information on searching these databases is provided at <http://fa.r9.fws.gov/r9fwrs/dbinfo.htm> or by pressing 

If you have problems, concerns or would like for FWRS staff to assist you with your search, please call us.
